

## Education

### University of Illinois Urbana Champaign

2017 - 2022

*Doctor of Philosophy* in **Computer Science**Dissertation: **Machine learning for drug discovery and beyond** (*advisor: Jian Peng*)

GPA: 4.00 / 4.00

Awards: **University Fellowship, Richard T. Cheng Endowed Fellowship**

### Brandeis University

2013 - 2017

*Bachelor of Science* in **Computer Science** and **Neuroscience**Senior Thesis: **Graph matching, pattern learning, and protein modeling** (*advisor: Pengyu Hong*)GPA: **3.96** / 4.00 (Overall)      **4.00** / 4.00 (CS)Awards: **Summa Cum Laude, Phi Beta Kappa (Junior), Schiff Fellowship, Collaborative Research Grant**

## Experience

### Founding Team | Osmo

Sep 2022 - Present

- ▶ Spinning out of Google, we start Osmo to give computers a sense of smell. ✨
- ▶ I lead the machine learning team responsible for the data collection strategy and model development behind fragrance molecule discovery and scent teleportation.

### Student Researcher | Google

May 2018 - Sep 2022

- ▶ I spent part of my Ph.D. working with the talented folks from Google Brain and Accelerated Science.
- ▶ Between 2020 to 2022, I worked on receptor binding, transfer learning, and metabolic activity related to odorant molecules with a team focusing on digitizing smell. I led/participated in one utility patent and four publications highlighted in various news outlets. Our team's discovery eventually led to the spinout of **Osmo**, backed by Google Venture, Lux Capital, and other investors with \$60M.
- ▶ In 2019, I proposed a combinatorial formulation for structural variant calling through ML-based filtering and perturbation to improve the precision of existing callers. An efficient (x100) algorithm is also developed to align reads to various genome construction and filed as a utility patent.
- ▶ In 2018, I leveraged the Generative Adversarial Network (GAN) and created a generative model to mediate the batch effect in high-content cell imaging. The model implementations are contributed to the TF-GAN library, and the work is later published in the Bioinformatics journal.

### Intern | DeepMind

Sep 2021 - Dec 2021

- ▶ I worked with folks in the AlphaFold team on protein-related projects.
- ▶ The tech stack of the projects involves JAX and different areas of the AlphaFold2 codebase.

### Software Engineering Intern | Uber

Summer 2016 &amp; 2017

- ▶ In 2017, I developed a variant of conditional random fields to infer key events during Uber Eats delivery with a mobile sensor. I also identified data quality issues causing performance degradation in the prior effort. The project won the first prize for Uber's internal machine learning poster session.
- ▶ In 2016, I designed and created a web application for internal mobile developers to investigate UI test failures that synchronize the test logs and video timestamps to reduce the debug time by 50%.
